Press Release

TxDOT approves Sediment Control Roll™

Austin, Texas – July 7, 2005

ERTEC Environmental Systems announced today that the Texas Department of Transportation approved its Sediment Control Roll for use on TxDOT projects. The Sediment Control Roll was approved as a substitute for silt fence or wattles for temporary erosion control in low flow urban applications such as along sidewalks, streets, and the back of curbs and in other low-flow applications.

Sediment Control Rolls can improve performance and significantly lower the life-cycle costs for temporary sediment control practices through longer life, lower maintenance and resistance to crushing and abrasion. Sediment Control Rolls are placed around the periphery of construction sites or along cut slopes, to keep disturbed soil from leaving the site during storms.

“ERTEC’s Sediment Control Roll works well as long as the storm water flow doesn’t overtop the device; the product filters sediment very well. The key points for this product are its ease of installation and removal, pleasant appearance after installation, reduced potential of injury to the public due to the anchors being placed below ground, and its sediment control capability,” said a spokesperson for the New Products Review Committee, Texas Department of Transportation.

About Texas Department of Transportation

The State of Texas Department of Transportation is responsible for the design, construction, maintenance, and operation of the Texas State Highway System, as well as that portion of the Interstate Highway System within the state’s boundaries.

About ERTEC Environmental Systems

ERTEC Environmental Systems is a specialty technology company, bringing exciting technology to the field of erosion and sediment control. Its proprietary technology stabilizes eroding land or significantly reduces unlawful sedimentation to global waterways. On average, ERTEC provides more effective solutions at half the total cost.
